

## SUPERIOR LED SIGNAL LIGHTS

### SUPER-COM™ LED LIGHTS MAXIMIZE SAFETY, PRODUCTIVITY, & ENERGY-EFFICIENCY AT THE LOADING DOCK

The LED red/green signal light operates in sync with the vehicle restraint control panel lights adding a superior level of security before entering the trailer.

LED lights are 24" wide with either a red light signaling the forklift operator to not enter the trailer or a green signal indicating that the trailer is restrained, and it is safe to enter. When the door is closed the LED lights remain red.

The robust welded mounting assembly spans the door opening and is fastened to the building wall outside of the door tracks and above the door opening.
